Features

Our Spiral Elevator is state-of-the art technology in vertical transportation of dry solids without any rotating / moving parts. Material moves upwards only by vibrations. Extremely useful in cooling operations, the material gets cooled due to tumbling effect while transportation.

Drive unit can be mounted on top or at the bottom as per space availability.

Perfect elastic isolation, no transmitted vibrations.

Choice of material of construction: Stainless Steel & Mild Steel.

Advantages of Vertical Conveyors

- Vertical Conveying used for Cooling
- Precisely engineered
- Lesser Foot Print Area
